

# Docker

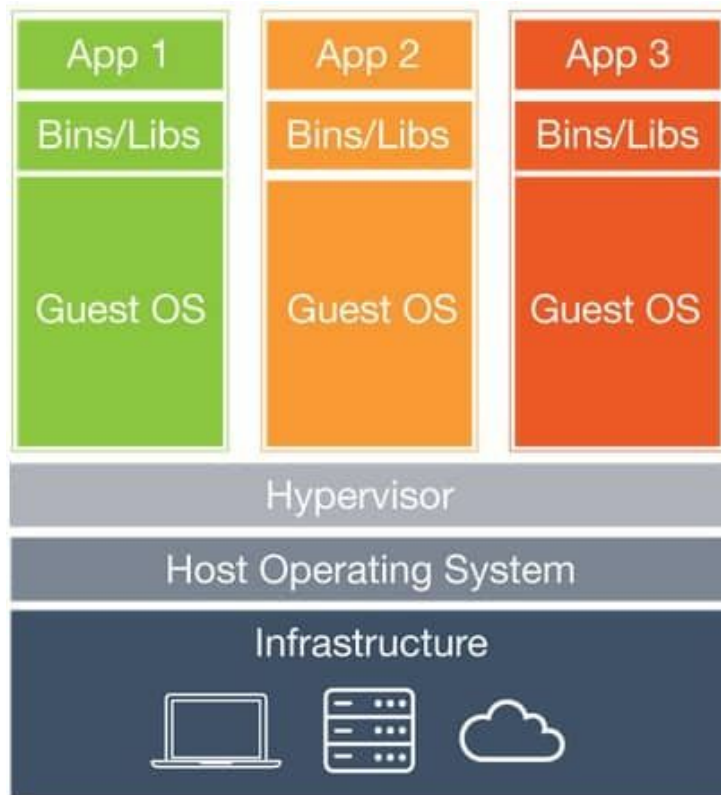

docker

# Docker architecture

**Virtual Machines**

**Containers**

# Work on your laptop, work on production

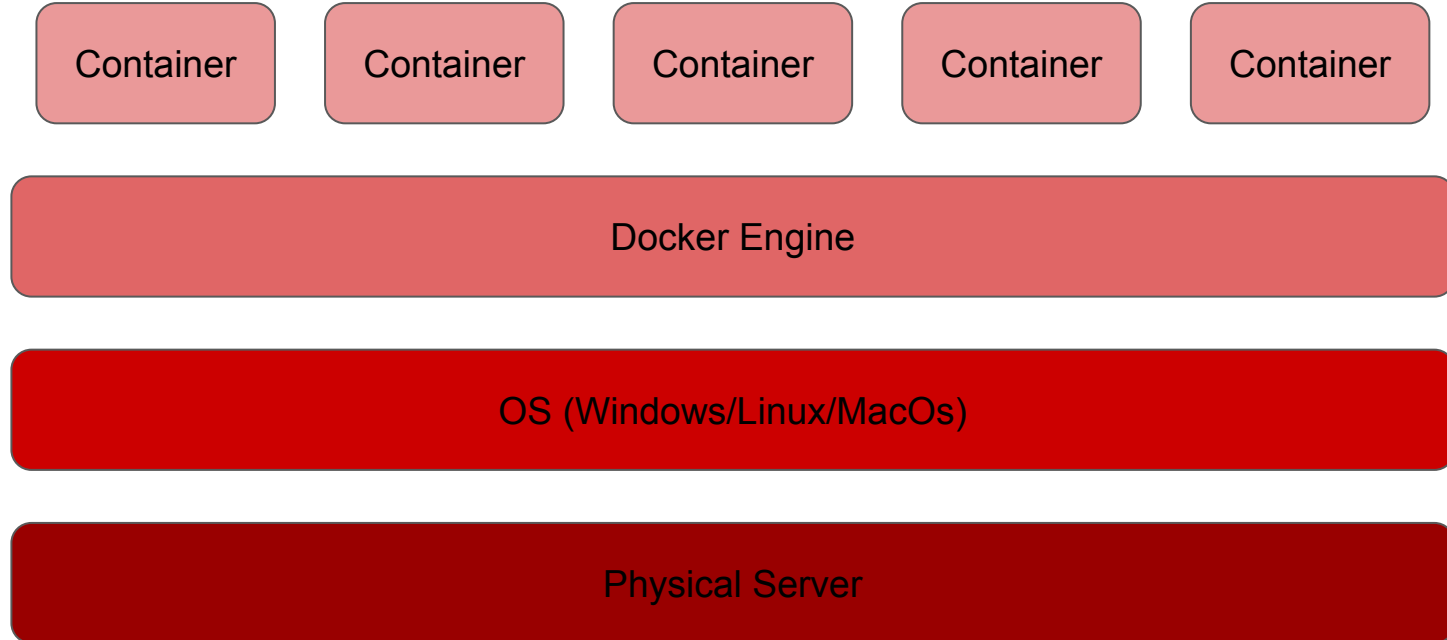

Adobe Stock / 412931953

# Docker Usage

- virtualisation
- simplify configuration
- huge repository of existing image
- easy to integrate in CI/CD
- simplify deployment

# Docker architecture

# Dockerfile

The Dockerfile is a document that lists all the commands that a user would run in order to build a Docker image.

You can see the Dockerfile as a **blueprint** for a layer cake mold.

Local machine

Dockerfile

FROM ...

COPY ...

RUN ...

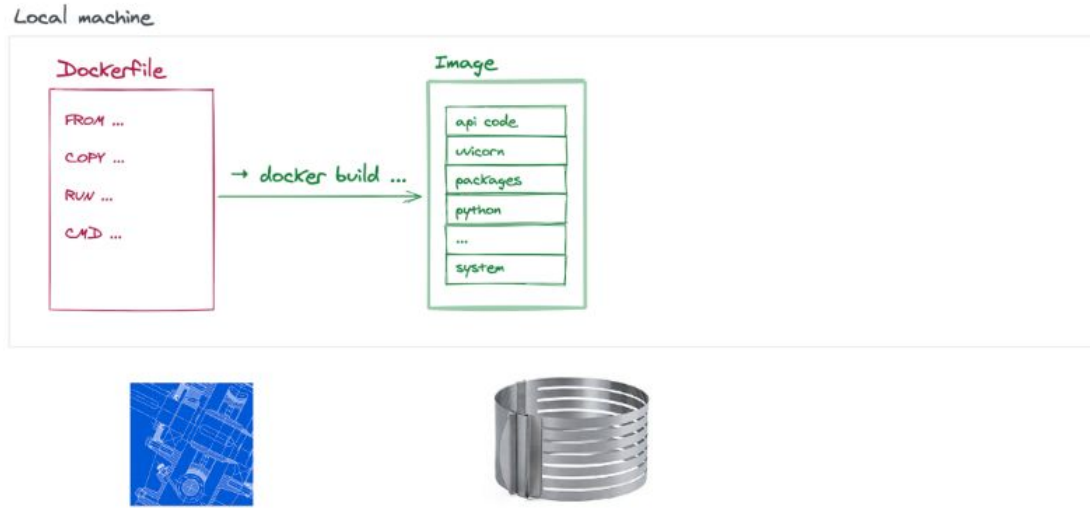

CMD ...

# Docker image

The Docker image holds all the files required in order to instantiate a Docker container.

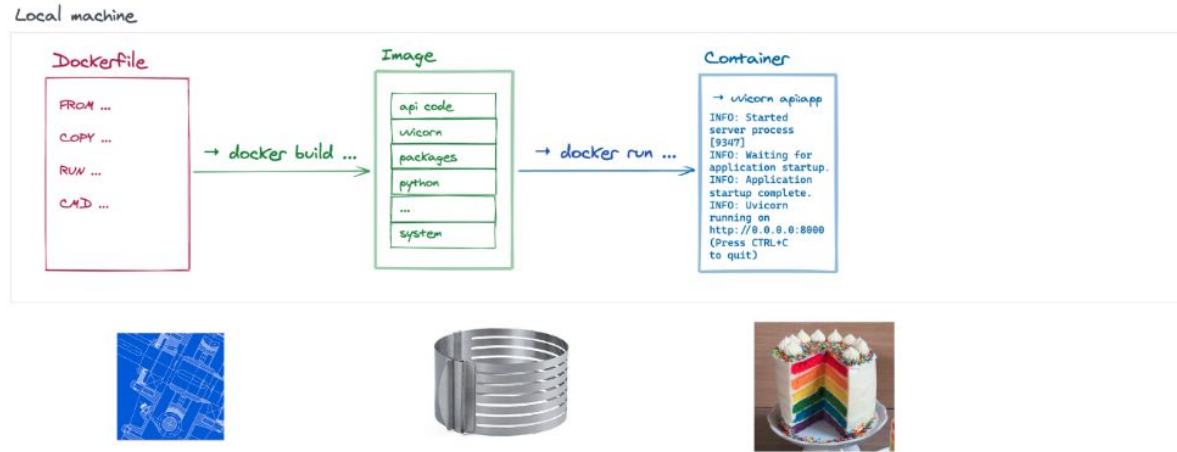

You can see the Docker image as a layer cake **mold**.

# Container

The Docker container hosts a running instance of your code.

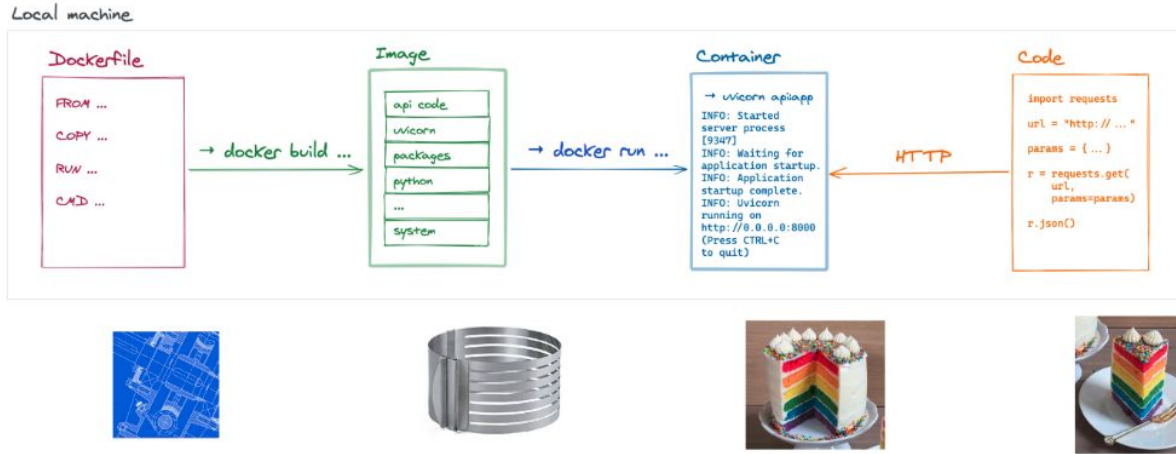

You can see the Docker container as a **layer cake**.

# Consumer

Our application will be consumed in different ways depending on its nature. A website will be consumed through a browser. An API will be consumed through code.

You can see the consumer of the application as receiving a **piece of the layer cake**.

## Dockerfile

```
FROM python:3
```

```
WORKDIR /usr/src/myapp
```

```
COPY requires.txt ./
```

```
RUN pip install --no-cache-dir -r requires.txt
```

```
COPY . .
```

```
CMD [ "python", "./myapp.py" ]
```

# Docker Hub

The screenshot shows the Docker Hub search results for the query 'ubuntu'. The browser address bar displays 'hub.docker.com/search?q=ubuntu'. The search bar at the top of the page contains 'ubuntu'. The results are sorted by 'Best Match' and show 1 - 25 of 128,872 results. The first three results are listed below:

- ubuntu** (DOCKER OFFICIAL IMAGE)  
Updated 5 days ago  
1B+ Downloads, 10K+ Stars  
Description: Ubuntu is a Debian-based Linux operating system based on free software.  
Architectures: Linux, ARM, ARM 64, PowerPC 64 LE, riscv64, IBM Z, 386, x86-64
- websphere-liberty** (DOCKER OFFICIAL IMAGE)  
Updated 5 days ago  
10M+ Downloads, 288 Stars  
Description: WebSphere Liberty multi-architecture images based on Ubuntu 18.04  
Architectures: Linux, 386, x86-64, PowerPC 64 LE, IBM Z
- ubuntu-debootstrap** (DOCKER OFFICIAL IMAGE)  
Updated 6 years ago  
5M+ Downloads, 46 Stars  
Description: DEPRECATED; use "ubuntu" instead

The left sidebar contains filters for Products (Images, Extensions, Plugins), Trusted Content (Docker Official Image, Verified Publisher, Sponsored OSS), Operating Systems (Linux, Windows), and Architectures (ARM, ARM 64, IBM POWER).

# Docker Compose

# Docker compose

- multiple isolated container
- data volume management
- interoperability between container

```
version: '2.1'

services:
  mydb:
    image: mysql
    restart: always
    volumes:
      - db_data:/var/lib/mysql/data
    environment:
      MYSQL_PASSWORD: password
      MYSQL_USER: admin
      POSTGRES_DB: myDB
    healthcheck:
      test: mysql -u "$$POSTGRES_USER"
      interval: 10s
      timeout: 2s
      retries: 10
  myapp:
    depends_on:
      mydb:
        condition: service_healthy
    image: mynodeapp
    ports:
      - "3000:3000"
    restart: always
    volumes:
      - data:/usr/app/data
volumes:
  db_data: {}
  nc_data: {}
```
